

Product Spec: One-Minute Save

THE PROBLEM

The Friction of Time Scarcity

A significant portion of streak losses stems from **time scarcity**, not a lack of motivation. Users skip late-night sessions because the perceived effort of a full lesson feels too high when willpower is lowest.

Primary KPI
Streak Continuation
Day N → N+1

Secondary KPI
DAU Retention
Daily Active Users

"At-risk users don't need a 'push'; they need a low-friction path to success that fits their current moment."

Typical User Engagement Timeline

THE INTERVENTION POINT

Lowering the barrier when willpower is at its lowest.

Product Spec: One-Minute Save

THE SOLUTION

Feature Spec: "One-Minute Save"

When the app predicts a likely miss, it triggers an ultra-short, review-only session ($\leq 60s$) that preserves the streak.

Content: Zero New Concepts

Focuses strictly on previously mastered "gold" material.
Minimizes cognitive load to ensure completion.

Reward: Reduced XP

Preserves the streak flame but offers 5-10 XP max.
Prevents "XP farming" or gaming the competitive leagues.

Frequency: Once per 24 Hours

Limited use prevents it from replacing core curriculum learning. It is an emergency exit, not a main path.

Technical note: Implemented by reusing existing lesson templates with a server-side time cap and eligibility gating.

Product Spec: One-Minute Save

THE SOLUTION

Placement & Triggering

- Triggered via intrusive Home Tab Modal if app is opened late (post 8 PM).
- "Last Chance" Push Notification deep-linking directly to the modal interface.

Eligibility Rules

- ✓ No lessons completed today (0 XP).
- ✓ User has active streak (>1 day).

Conflict Resolution

Vs. Streak Freeze

This feature takes priority over Streak Freeze to encourage active engagement over passive "safety nets." We want users to open the app.

Cooldown Mechanism

Mandatory cooldown (e.g., cannot be used 3 days in a row) prevents erosion of the core lesson habit.

TRIGGER

USER OPENS APP AT 10 PM WITH 0 XP COMPLETED

ENTRY

MODAL APPEARS OFFERING "ONE-MINUTE SAVE"

EXPERIENCE

RESEARCH PHASE

Validation Plan (Pre-Build)

Measuring user intent and reducing risk before a full engine build.

Hypothesis	Validation Method
Time, not motivation, is the blocker.	Fake-Door Test: Show the modal but link it to the shortest existing lesson to measure Click-Through Rate (CTR).
The "60-second" promise is the hook.	A/B Copy Testing: Test push/modal copy: "Keep your streak" vs. "Save your streak in 60 seconds."
Users won't stop doing regular lessons.	Hold-out Group: Compare next-day return rates and lesson types to ensure users aren't becoming "lazy" learners.

Product Spec: One-Minute Save

EVALUATION

Guardrail Metrics

Learning Breadth: Ensure no significant drop in total "Regular Lessons" completed per week.

XP Health: Monitor for "ghost learners" who only use the Save feature (triggers harder cooldown).

Experimentation Design

Control
Standard late-night push notifications & dashboard.

Variant
"One-Minute Save" enabled for users with 0 XP after 8 PM.

✓ SHIP BROADLY

If streak continuation increases with no learning quality degradation.

⚠ REITERATE

If saves rise but XP inflation or reliance appears. Adjust cooldowns, reduce rewards, or increase difficulty.

✗ STOP

If streak continuation improves but next-day retention does not, this indicates the metric is a "vanity" gain without real habit impact.
